Healthy Aging and Your Skin

Trends and Treatments for Baby Boomers

With more than 70 million baby boomers in the United States poised to join the ranks of those aged 65 and older in coming years, this generation has embraced a new twist on aging gracefully. These individuals don't think of themselves as old, and in many respects, they are not, at least not in the same sense their parents were after they passed the 65-year mark.

A State of Mind

In addition to wanting to remain vital and active, boomers are increasingly expressing a desire to look as young as they feel. Many boomers are turning to minimally invasive procedures to avoid the downtime and drastic changes in

One of the first indicators of overall health and how gracefully someone is aging is the condition of someone's skin. Take the backs of the hands, for example. The increasingly noticeable and enlarging veins and so-called age spots are some of the first telltale signs of aging.

Vitality at Any Age

John Roseby, executive spa director at the famous Arizona-based spa, Canyon Ranch, says skin care, massage, and bodywork are part of their wellness philosophy.

"Health and vitality at any age is one of our core messages and one we believe in

Feeling fit and healthy--no matter what your age--contributes to a quality life.

appearance associated with plastic surgery. Almost miraculously, it's possible to look much younger than one's years, since modern health care is helping ward off life-shortening disease at a tremendous rate. The result is a growing population expected to live longer than any generation before and to look better doing it.

passionately," he says. "Regular skin care programs allow vibrant health to shine from deep within."

Anne Williams, esthetician and director of education at Associated Bodywork and Massage Professionals, agrees and says a spa is an excellent place to treat the

entire body. "Massage improves the appearance and condition of skin, and tones muscle tissue, thanks to improved local circulation."

With age and inactivity, circulation slows and skin becomes pale and cold. "Massage has a stimulating cellular function in the hypodermis, dermis, and epidermis," says Sharon Puszko, director of Day-Break Geriatric Massage Institute. "Touch nurtures, relaxes, and heals, as well as stimulates and activates."

Ultimately, Williams says, one of the greatest benefits of any type of skin care and bodywork treatment is the ability it gives you to reconnect. "You re-experience your body. When you're in your body, you own it in a different way. You care about it in a different way."

Skin's Graceful Aging

Proper skin care can help ward off signs of aging. Here are some healthful skin care tips for caring for maturing skin.

Protect Your Skin

The most important thing you can do for your skin, Williams says, is to consistently use sunscreen. Whether skiing the Colorado Rockies, swimming the Pacific Ocean, or just walking to your car for a lunch break, sunscreen should be a part of your daily routine, as sun damage is the number one cause of prematurely aged skin. Consider buying makeup or moisturizer with an SPF of 15 or higher to ensure constant protection. To protect you from the full range of ultraviolet rays, look for products containing at least one of these ingredients: avobenzene, titanium dioxide, or zinc oxide.

Keep it Moist

Depending on where you live, you may not give much credence to moisturizer use, but experts say it is a critical piece of the puzzle for great skin. Avoid traditional grocery store finds in favor of a more targeted moisturizing product, preferably one recommended by your esthetician. If you spend money on anything, Williams says, spend it on a good moisturizer. A gentle cleanser (no bar soap on the face, ever, she says) and an alcohol-free toner will round out a simple, yet effective skin care plan. In general, it's a good idea to stick with one

product line since products are usually designed to work together.

Don't Overdo It

In our zeal to clean our skin, we often overdo it. Just as you shouldn't exfoliate too often (no more than once a week), you should also avoid overscrubbing your face, even with just water and a washcloth. Your skin is fragile; treat it as such. It pays to leave the serious exfoliation to an expert esthetician and go gently on your skin at home.

Watch What You Eat

The healthier you eat, the better your skin will look. This means natural, unprocessed foods with high antioxidant and vitamin contents (in other words, fruits and vegetables). Strive to replace processed breads and cereals with whole-grain alternatives that contain fiber. Eliminate or go easy on caffeine and sugar. Many believe drinking plenty of water will keep your skin hydrated and healthy.

Talk to the Experts

Williams says working with a skin care professional will help establish a good base of knowledge about how to care for

your skin. Having an expert who knows you and your history will help address changes going forward. For example, if you change climates, your skin's needs will change as well. The same is true with the seasons.

The seasons of your life will bring yet more changes to your skin care needs. Talking to an expert will help guide you through those changes and give you proactive self-care steps. Growing older doesn't have to mean growing old.

An esthetician can help you determine noninvasive ways to maintain a healthy complexion.

What is LED Therapy?

Carrie Patrick

LED therapy is a skin care treatment that uses light-emitting diodes (LEDs) of various colors, normally red, blue, and infrared, to maintain healthy skin. LEDs produce a low-powered glowing light, which is positioned to shine onto the face or other area being treated. No heat is produced by the LEDs, and it should not be confused with laser therapy.

The skin benefits of different colors of LED light have been identified through a broad array of studies. The most often cited study is the Whelan study, published in 2001 by NASA's Marshall Space Flight Center, which found that LED light helped speed up wound healing.

Red light is most often used for general skin improvement and to reduce the visible signs of aging. Blue light has been shown to destroy acne bacteria. Infrared light may have beneficial effects on the skin's natural supply of collagen and elastin, which are responsible for maintaining skin firmness and

resilience. A series of regular treatments will provide the best results.

WHAT CAN I EXPECT?

No special preparation is necessary. Simply arrive to your appointment on time, relax, and enjoy the treatment. Your skin care professional will cleanse your skin and may also apply a serum or other facial products to enhance the benefits of your session, depending on your goals and the range of treatments offered.

The LED device will be positioned on your skin, or up to a few inches away. Your eyes will be covered so that the light does not bother you. Relax and rest while the glow of the LEDs bathes your skin.

Typically, no sensation is felt. Some people may feel a slight tingling, or see flashes in their vision temporarily as a result of having a light source close to their face. Keeping your eyes closed and covered during the treatment will help

avoid this.

LED therapy can help maintain healthy skin.

Coenzyme Q10

The Wrinkle Cure

Air pollutants, toxins, cigarette smoke, cell metabolism, exposure to the sun, and other environmental factors initiate free radicals, which can cause dangerous reactions that destroy cells and damage DNA, proteins, and fats. Free radicals also interfere with collagen production and integrity, resulting in loss of elasticity and, ultimately, aging skin. Although this is a natural and unavoidable by-product of metabolism, an overabundance of free radical damage can cause premature aging and wrinkles. Fortunately, there's a nutritional way to fight the elements.

Coenzyme Q10, also called CoQ10 and ubiquinone, is a fat soluble, vitamin-like nutrient present in virtually all cells and considered the spark plug of the body, helping to produce and regulate energy as well as fighting free radicals as an antioxidant.

CoQ10 levels are highest during the first 20 years of life and decline with time, so much so that at age 80, CoQ10 levels may be lower than at birth. Yet the body's demand for CoQ10 increases

with age. Furthermore, statin (cholesterol-lowering) medications can further deplete the body of CoQ10.

The recommended daily CoQ10 dose is 30 mg, in combination with alpha lipoic acid and vitamins A, C, E, and selenium. Foods highest in CoQ10 include sardines, beef, peanuts, spinach, and albacore tuna. However, it would take a pound of sardines, two pounds of beef, or two-and-a-half pounds of peanuts to provide 30 mg, and cooking foods at high temperatures degrades the enzyme. Consequently, CoQ10 supplementation is likely necessary to achieve therapeutic effects.

CoQ10 can also benefit topically, as it's a small molecule that can easily penetrate the skin. When CoQ10 is combined with vitamins C and E in creams or lotions, the synergistic effect can neutralize free radicals, thus reducing wrinkles.

Supplementing with CoQ10 is not only a good antiaging strategy for the skin, it can also enhance energy, cognition,

heart health, stroke prevention, and immune support.
